

Remote Workforce Analytics

Whether remote work is new to your organization or you've been doing it successfully for years, your employees have likely experienced both the benefits and the challenges of getting things done away from the office.

Important questions to ask when implementing a remote workforce:

- How can the capacity to work remotely be measured and understood?
- How can leaders adjust their management style to help employees succeed in a remote environment?
- How can data and talent analytics assist in making good decisions for your organization?

Harrison has developed specific Remote Work Behavioural Competencies to help organizations maximize performance and meet the challenges of working in a remote environment. Using our unique behavioural competencies framework, we have developed two new competencies for **Remote Productivity** and **Remote Communication**.

There are two versions of the competencies: One for remote workers and the other for leaders who manage remote workers.

Remote Workers - can compare their own behavioural tendencies to those that are most likely to produce positive outcomes.

Leaders of Remote Workers - can gain insights into their own management style and potential adjustments that will benefit team members and organizational performance.

Remote Workforce Analytics

Different People = Different Challenges

While many people enjoy working remotely and do so successfully, a multitude of challenges can make it quite difficult for others:

- Requires self-discipline
- Possible lack of structure
- Lack of social contact and potential feelings of isolation
- Overwork/stress from not being able to switch off
- Difficulty prioritizing tasks
- Managing different kinds of interruptions from family, children, pets
- · Adapting to new technology and associated outages
- Managing physical and mental health
- Lack of clarity in deliverables

Analysis - Identifying Development & Training Needs

The Remote Worker Analysis Reports target three distinct areas:

1. The Remote Work Behavioural Competencies which identify traits needed for effective remote productivity and communication.

2. The Behavioural Success Analysis Report identifies an individual's fit with the job which is the primary foundation for successful remote working.

3. The Engagement and Retention Report assesses the individual's level of engagement which is also a foundation for successful remote working.

Brandon Hall Award Winner

We were proud to be acknowledged as a winner of the Silver award for Innovating Remote Workforce Analytics in the category of Best Advance in Technology Innovation for the Remote Workforce.

Essential traits		Negative Impact < > Positive Impact											
(in order of importance)	Andrew's Goom	Very streeg	Strong	Gubstantial	Moderate	Skphi	No impact	CALON	Moderate	Substantial	Strong		
Persistent! The tendency to be tenocious despite encountering significant electode Narrative-Andrew is very determined and perseveres with a task	8.6												
despite many obstacles. This will probably have a somewhat positive impact on this behavioral competency.													
Self-improvement: The tendency to attempt to develop or better oneself													
Namative: Andrew has an intention to improve himself. This will probably be sufficient for this behavioral competency.	6.6					-			-	7			
Optimistic: The tendency to believe the future will be positive		F											
Narrative: Andrew tends to be extremely optimistic and cheerful. Andrew's positive attitude will be very beneficial when dealing with staff and co-vockeus. This will probably have a somewhat positive impact on this behavioral competency.	9.5						1		-				
Exthusiantic: The tendency to be enger and excited toward one's own pools Narrative: Andrews tends to be quite enthusiantic about his goals. If Andrews's goals are in adigment with the organization's objectives, have? I probably have a drive to achieve these objectives. This will probably have a site/with contain virtuation this behaviored	8.2			c				0		-			
ompetency.													
Organized: The tendency to place and maintain order in an environment or situation. Namative: Andrew probably prefers net to do much organizing. He	3.9				_	D			_				
may do the minimum amount of organizing necessary and may occasionally lose efficiency. This will probably have a slightly negative impact on this behavioral competency.													
Analytical: The tendency to Sagically examine facts and situations (not necessarily analytical ability)	7.5					_							
Narrative: Andrew tends to analyze problems and decisions and enjoys it. This will probably be sufficient for this behavioral competency.
